

*Our best wishes for a successful continuation of the
Clean, Sustainable Energy Evolution*

Renewed Credo for 2018

- **Replace all polluting, risky unsustainable energy technologies by clean ones**
- **Redirect all subsidies from military, nuclear and other dangerous systems**
- **Reduce health cost and death casualties by clean energy technologies**
- **Make all clean energy systems main-stream by adequate financing**

.. for a naturally green planet Earth

Humankind has to find its way back to nature without squandering finite resources polluting the environment and endangering the health.

..... in pure air and with clean water

Air pollution and contaminations of water, soils and food must be drastically reduced by clean technologies.

..... Clean Sustainable Energy for All

All our associated organizations are working for the implementation of affordable, clean, decentralized environment-friendly energy systems for everybody

..... peacefully in an Armless Society

The wasteful war budgets of over a Trillion \$ per year must be deviated to peace-building activities and for clean sustainable energies to protect humankind and nature from destruction and to deprive terrorism of all fire arms and explosives !

Progress Report 2017 and Outlook for 2018

The call by former UN Secretary General Ban Ki-moon and ISEO "**Clean, Sustainable Energy for All**" concurrent with the **UN Sustainable Energy Decade** started at the ISEO congress in 2012 and pursued at the **25th Anniversary of the World Clean Energy Conference** in 2016 in Geneva, the **Sustainable Development Goals**, were complemented by the **COP23 objectives** in Bonn and the **UNEP goals** for less pollution by cleaner technologies, fostered also by the **UNISDR & ISEO MEDSHILD-REDSHILD** projects for natural **disaster prevention**, to help humanity to survive, thanks to the **CMDC-ISEO Naturally Fit & Healthy*** guide and the **Global Ethics Code*** to enable humankind to reduce sufferings by replacing ill-conceived technologies and thoughtless human misbehavior.

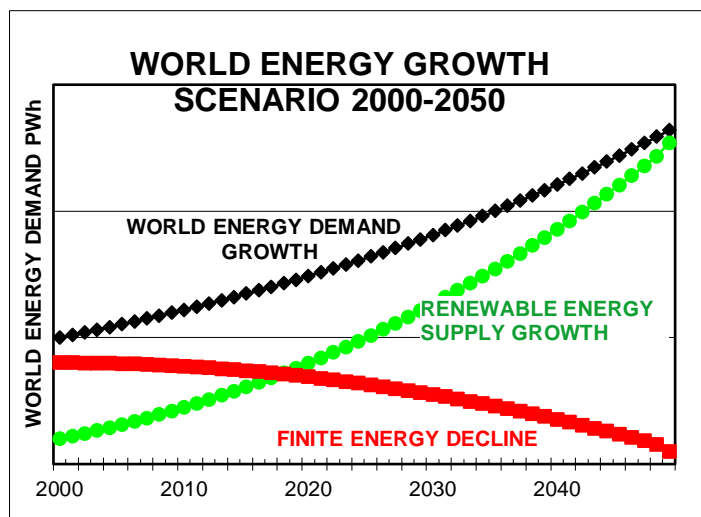

Instead of wasting more tax payer's moneys into arms at the bad examples like the USA, China, Russia and North Korea, it is time to **prohibit arms world-wide** by a United Nations consensus and to redirect the money to survival measures for planet Earth, before it is too late. The oceans, rivers and lakes must become clean by **avoiding chemicals and plastics pollution**. The millions of tons wasted plastics must be reprocessed and recuperated from nature. **Pesticides and herbicides must be prohibited**.

It is high time to **stop religious conflicts** in the Caucasus, Turkey, Yemen, Syria, Egypt and Palestine by terrorist groups like ISIS, killing innocent people and depriving children of education and healthy food.

Priorities for 2018

1) Energy

2017 was again a record year of clean, renewable energy growth with the total investment exceeding 300'000'000'000 USD (>300 billion \$), while investments in finite fossil energy systems were shrinking and funds withdrawn from fossil fuel production, refining and distribution. This worldwide trend must and will increase in 2018 to the demise of military budgets, wasting billions of \$, instead of enabling the survival on Earth by protecting the climate, biospheres, waters and humanity's health. More coal mines are closed and dangerous power plants decommissioned to avoid catastrophes like Fukushima and Chernobyl - all to be replaced by safe, sustainable energy generation to power the millions of electric vehicles and smart building systems, not needing fossil fuels anymore.

2) Arms-free Society and Population Growth Control

Why does humanity need weaponry? Why should people continue the millennium old bad habit to kill each other for religious, racial or territorial reasons? Why should mad school children, mentally sick adults and terrorists be allowed to kill innocent compatriots.

The time has come now in the 3rd Millennium to stop the mad nonsense of wasting trillions of tax payer's moneys for unproductive ends, instead of saving the environment from decay caused by an exponentially growing world population suffering from hunger and traumatic migration. These trillions of military dollars are needed to replace polluting energies by clean, sustainable ones, to feed and educate the needy people and to exercise birth control measures to stabilize the world population, rather than brutally killing them by arms. President Trump's approach to defence and national security issues in his first year in office with his contradiction to UN disarmament efforts has been a shock to the whole world.

The World Circle of the Consensus CMDC and ISEO appealed to the UN Secretary General to initiate the World Arms-Free Society – the most noble and top urgent humanitarian task for the UN in the 3rd Millennium.

3) Health and Diets

The world-wide trend towards natural vegetarian bio products is gaining momentum. "Back to nature" should become everyone's vocation, realizing that too much chemistry in daily life and agriculture is impairing the health and biospheres. Meat production is wasting too much energy and fertile land.

Natural alternative therapies are becoming more and more acceptable by health insurers. The "**Naturally Fit & Healthy**" guide for a sustainable, long life is available from the ISEO secretariat in Geneva free of charge for members - see contact below.

At the **WCEC World Clean Energy Conference** in Geneva, **Dr.med. Maria Neira**, Environment Director of the World Health Organization WHO stressed that the high number of death casualties and millions of health sufferings could be avoided by the **reduction of energy pollution**. UN-ECE Energy Director **Scott Foster** redefined the value of energy in the sense of providing **clean energy services** - see UN TED TALK video on www.iseo.uno.

Read and help to update the **Blueprint for the Clean, Sustainable Energy Age** on www.wcec.uno.

Everybody is cordially invited to join ISEO for the advancement of the quality of life. You may start local action groups for the implementation of clean technologies and meet at joint conferences. You are very welcome to order the ISEO Newsletters and publications by the enrolment form under the "Application" button on www.iseo.uno.
